

Acer eRecovery Management is a practical application designed to help you back up your system. The created backup files can be used to restore the system to a previous state with minimum effort. Developed specifically for ACER laptops This tool is designed for the ACER laptop users that want to recover their information after a virus attack or a system crash. You can also use it to create periodical backups if you want to make sure that you are able to restore the computer to a certain state. The importance of backup operations It is recommended that you create the recovery discs when you use the computer for the first time or when your frequently used applications are installed on it. Since the recovery discs enable you to restore the computer to the moment of creating them, it makes sense to back up the computer when everything is working fine. Simple GUI The interface of the program is easy to use and guides you through all the required steps. You just need to start the program and choose the operation that you want to perform. Whether you need to back up or restore the computer the options are clearly explained in the main window. Recovery options When restoring your computer you can choose from completely reinstalling the entire operating system or reinstalling only certain applications and drivers that you are having problems with. This allows you to minimize the modifications and the time spent with the recovery. Before starting the system recovery, make sure that your data is backed up on a disk or a separate partition. You have the option of preserving the content of the user account folder, but all other folders are deleted in the recovery process. Bottom line Overall, the application provides you with the basic features required to restore your computer or certain applications to a functional state without having to manually set up the operating system.
