Hollywood actor Dev is seen in the film. Watch the movie trailer of the film and get to know more about it here at khokababu movie info page.

Crosstalk between the hepatocyte nuclear factor 4 alpha/hepatocyte nuclear factor 1 axis and the forkhead box A2 axis in nonalcoholic fatty liver disease. Hepatocyte nuclear factor 4 alpha (HNF-4 $\alpha$ ) and forkhead box A2 (Foxa2) are important transcription factors in the development of the liver. HNF-4 $\alpha$  promotes the activation of Foxa2 and cholesterol metabolism, whereas Foxa2 attenuates HNF-4 $\alpha$  expression and cholesterol synthesis in the liver. We hypothesized that there is crosstalk between the HNF-4 $\alpha$ /Foxa2 axis and the sterol-responsive element-binding protein 2/SREBP2/SCAP/S1P axis in nonalcoholic fatty liver disease (NAFLD). Steatosis was induced in human hepatoma HepG2 cells by free fatty acid (FFA), palmitate, and oleate treatment. In human healthy liver tissue, the expression of HNF-4 $\alpha$  and Foxa2 was lower, and that of SREBP2, SCAP, S1P, and target genes was higher, than in nonalcoholic steatohepatitis and fatty liver. In HepG2 cells, the expression of SCAP and S1P was decreased by HNF-4 $\alpha$  knockdown and increased by Foxa2 knockdown. The activity of SREBP2 was increased by high-level Foxa2 expression, but decreased by HNF-4 $\alpha$  expression. SCAP expression was increased by Foxa2 knockdown, but decreased by HNF-4 $\alpha$  knockdown. Oleate reduced the expression of SCAP and S1P in Hep 0cc13bf012
