Do I need to use a different URL? It seems strange that the following code does generate a link, but that the LinkedIn API does not work. Any advice is appreciated. A: I was able to get the LinkedIn API to work by adding the following snippet to my header.php file: " /> There seems to be a bug in LinkedIn's API regarding the og:url property, which does not seem to work with the home_url() function. The home_url() function seems to work at least for first- and last-level pages. The Analysis of Metabolomics Data in the Era of Universal Completeness.
