Integration of Google maps within Autodesk 2D drawing References Category:Autodesk Category:Computer-aided design software Category:Graphics software Category:Windows graphics-related software Category:Windows-only softwareThat doesn't sound like a good idea to me. Anyway, have you updated your firmware? Since I can remember there have been issues with the Galaxy S7 series in the 4.4.X series. Never had any major issues, but it could be a few bugs here and there. I love my S7. It's a fantastic device. But, my next phone is either going to be the note 9 or the S9. I think that makes people unappreciative of higher end devices. \$1200 is a lot of money for a phone that basically just sits on a table. I know that it costs more to make but we are really only looking at "luxury" devices. This is an iPhone 6, 5S or 4S. I just got an iPhone 6 and it's perfect. I highly recommend it. I'm a Note 8 and S8 owner, and I have to say I don't miss the Note. I do miss it's S Pen and battery life. But the Note is fast and the camera has improved dramatically. The screen is AMOLED which I don't care for. I don't miss the Android garbage either, because I really don't use it. I just use the iPhone. It's been three months, maybe I'm getting the hang of it. The S8 had the left side covered by touch. At first I would cover it all up and write, but then I realized it's redundant. I can use the buttons to switch apps and take a screenshot. Maybe I'm getting used to using the touch on the right side for all the same reasons. I read that Android has a new update on the way that will supposedly fix many of the problems with performance and battery life. Maybe I'll see a difference soon. The S8 is going to the Google Store anyway, so I have to be a little patient. That doesn't sound like a good idea to me af5dca3d97

At the top of the screen, click on the [Show] command. Note: The program will run with the latest version of Autocad and will work with the latest version of the manufacturer-specific keychain. Limitations The official Autocad site has not yet released any new versions of Autocad for Linux. References Category:Autodesk Category:Free CAD software

Marijuana strain looks like a movie prop I'm a big fan of the American movie trilogy of "Crimson Tide" and "Crimson Tide 2," but I won't be seeing the third movie. It's just too long. It's been nearly five years since the last installment of the "Tide" trilogy, but the sequel is due out on February 23, 2014, and there's no marijuana in the screenplay. I'm definitely not a marijuana enthusiast, but the marijuana strain that will be marketed as "Crimson Tide" seems to have less cannabidiol and more hash. It's officially known as "Southwest Green Wave," but if it looks like the movie prop shown in the photos below, I think it'll be a hit.

Q: Python: printing memory address instead of string So I am just learning python and I made this little program:

```
def print_memory_address():
memory_address = 0xFFFFFFFFFFFFFFFF0
return memory_address
def main():
my_string = "Hi!"
print_memory_address()
print my_string
```

And it keeps printing the memory address instead of the string: 63419093 Hi! 0xFFFFFFFFFFFFFFFF0 So what is the problem here and how do I fix it? I want the string to print and not the memory address. Thanks.

A: If you run your code it will print the memory address but if you use your code from your question you get the expected result:

```
>>> def print_memory_address(): ... memory_address = 0xFFFFFFFFFFFFFFFF0 ... return memory_address ... >>> my_string = "
```

What's New in the AutoCAD?

AutoCAD is getting some new helpful tools to make it more accessible to users who are not proficient in AutoCAD. The new AutoCAD import features help you send and receive text, graphics, and drawings by email. You can import text, graphics, and drawings from anywhere in your email, attach them to a message, and then send them as a single email or as separate files.

Importing and sending feedback in AutoCAD You can use the Markup import feature to send and receive feedback from CAD operators and technical support personnel. You can import the operators' feedback by opening a mark-up report (.wrp) and attaching it to an email or other file. The Markup Assist feature imports drawings from other drawings that have been imported with the Markup Import feature.

Requirements CAD operators and technical support personnel are required to use AutoCAD to create and view mark-up reports. They can import and export mark-up reports, but they cannot send, receive, or view mark-ups in an email or any other application.

Markups and Markup Reports The Markup Import feature lets you import drawings from other drawings that have been imported using Markup Import. Here is a sequence of steps that you might follow if you want to import a mark-up report in AutoCAD:

1. Import an AutoCAD drawing that has a mark-up report by using the Markup Import feature.
2. Close the drawing and then reopen it.
3. Start a drawing session and select Markup Import in the Options dialog box.
4. Select the .wrp file that you want to import, and then choose Open from the Choose File menu.
5. After the report opens in the drawing, the report is marked with a new reference stamp. The reference stamp looks like a page number.
6. You can highlight or mark the entire report in the drawing. If you want to keep the report, you can draw a shape around it or move it to another drawing.
7. If you want to send the report, you can right-click the stamp and choose Save as PDF or Save as DXF. If you want to keep the report, you can right-click it and choose Export.
8. You can also use the Export Attachment

command to save the report as a separate file.
